Portfolio Milestone

Intelligent search methods are a useful technique that could be used in my recycling project. It can be helpful in finding certain features in a large dataset of different kinds of materials (Khemani, D., 2024, September 27).

However, I will not be using intelligent search methods in my project because the primary goal is utilizing multi-class classification and computer vision techniques. Instead of focusing on retrieving certain elements from a dataset, my project focuses on analyzing and classifying images.
